LEGO MINDSTORMS

EV3 Kit

The image below shows the components of the Lego Mindstorms EV3 kit, which allows users to build and program robots. The robots may be programmed through [an app](#) on a mobile device or by using the laptop included in the Library Innovation Studio. You'll probably want to allow a substantial amount of table space to use this item. These devices are not generally set out throughout the entire day. The library should set up the mobile station for specific hours during the week and check it out for in-library use.
